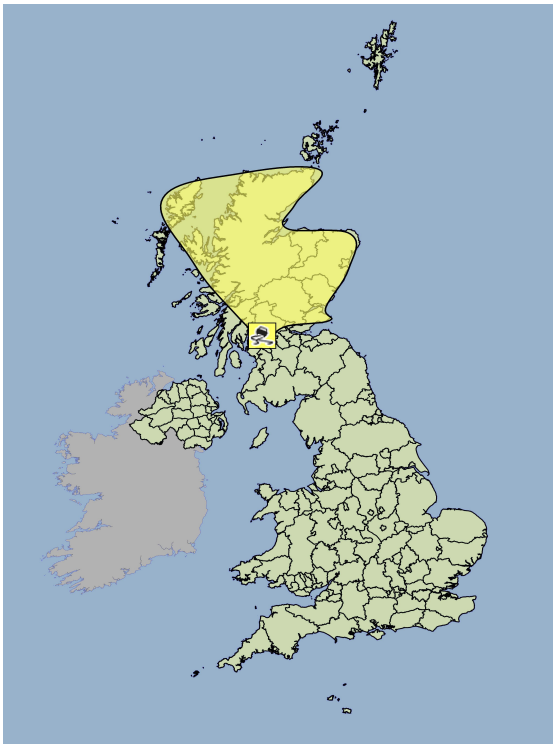
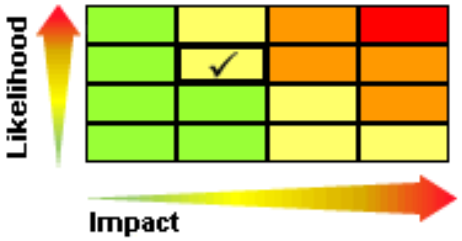
National Severe Weather Warning Service





Chief Forecasters Assessment
A cold and showery west to northwesterly airstream will affect the region through Friday, whilst a band of more organised rain, sleet and some snow moves eastwards during the evening, clearing to the south and east overnight. Several centimetres of snow may accumulate over higher ground, with the level varying with time, but the main hazard is expected to be ice forming on untreated surfaces.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **17:00 on Fri, 02nd Jan 2015** until **10:00 on Sat, 03rd Jan 2015**

It will be a cold night across much of northern Scotland tonight. Temperatures will fall this evening bringing an ice risk after today's heavy showers. A slight warming within a more organised spell of rain, sleet, and some temporary snow above 100-200 metres, will move in to central parts this evening before moving south. The ice risk increases again after midnight as temperatures fall under clearing skies.

The public should be aware of the risk of some difficult driving conditions.
